

Features of V82 Series

V82 series Ball valves are classified into 3 types according to the temperature range in use. V82 series is for general use and VL82 is adequate to the low temperature range. VG82 can be used in the wider temperature range from low to high temperature. The exact temperature range of each type is referred to the technical data of the type.

- Sealing is achieved without system pressure
- Bi-directional flow
- **Nylon Directional handle** - indicates the flow through the valve.
- **Panel mounting nut** - is standard and permits valve to panel or actuator.
- **Top-loaded packing** - allows packing adjustment with the valve in-line.
- **Capsule packing** - fills voids in the valve body and prevents fluid entrapment.
 - allows lowest dead space.
- **Support rings and discs** - retains the capsule packing and prevent cold flow.
- **Integral ball stem** - machined from single piece bar stock.
 - eliminates the backlash during handle actuation.
- **One-piece body** - reduces the number of potential leak points.
- Pressure up to 3000 psig (206 bar)
- Lowest dead space design

Operation & Packing Adjustment

- V82 valves are designed to control fluid in full open and closed position; using V82 valves to throttle the flow may reduce the valve life.
- Valves that have not been actuated for a period of time may have a higher initial actuation torque.
- Every valve working pressure is adjusted for factory test at 1,000 psig (68.9 bar) @ 21°C (70°F). For use in higher pressure or lower temperature range, the valve packing may be required for re-adjustment.
- Packing adjustment may be required during the valve in service.

Application

- Analytical market requiring a valve with lowest dead volume to prevent fluid entrapment which can cause contamination.
- Control Sampling Systems, and Process Instrumentation market requiring a valve with compact size, high flow capacity and directional indication of flow.

Factory Test and Packaging

- Every valve is factory tested with nitrogen gas at 1,000 psig (68.9 bar) for leakage at seat to a maximum allowable leak rate of 0.1 SCCM. The packing is tested with nitrogen gas for no detectable leakage.
- Every valve is cleaned and packaged in accordance with DK cleaning standard DC-01
